	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Collect NBA team statistics ● Analyze the relationship between a team's three-point shooting statistics and its winning percentage ● Compare offensive three-point production with defensive three-point prevention to determine which has a stronger relationship with winning.	**Schedule - (For V2.0+)** ● Incorporate individual player statistics to evaluate the impact of specific players on success. ● Analyze multiple NBA seasons to identify changes in three-point strategies over time. ● Compare teams based on different three-point strategies and playing styles.
Not Important	**Delegate - (Use a library)** ● Use Python libraries such as Pandas to organize and analyze NBA statistics. ● Use an existing NBA API or dataset to collect statistics instead of manually gathering data. ● Use Matplotlib to generate graphs and visualizations instead of building a graphing system from scratch.	**Delete - (Cut it)** ● Create a live game tracker that updates statistics during games. ● Build a system that automatically recommends individual player trades or roster changes. ● Develop a model that predicts the winner of every game.
